Clean root-cause patches backed by passing regression tests

Instead of blind trial-and-error edits, every bug fix isolates the exact failing line, patches concurrency or API edge cases cleanly, and proves stability with a before-and-after test run.

BEFORE PATCH	AFTER PATCH
HTTP 429 / Crash	**200 OK Verified**
Uncaught JSONDecodeError & async race deadlock	Semaphore rate guard + strict fallback parser

> **Zero-Risk Pre-Check:** Paste your error traceback + script in Fiverr chat before ordering—I confirm the root cause upfront so you pick the exact tier needed.

`git diff — src/webhook_sync_worker.py` `+9 additions / -4 deletions`

```
 async def process_webhook_batch(items: list[dict]):
-    results = await asyncio.gather(*(post_item(i) for i in items))
-    return [json.loads(r.text)["id"] for r in results]
+    sem = asyncio.Semaphore(5)  # Prevents 429 burst throttling
+    async def safe_post(item: dict) -> str | None:
+        async with sem:
+            resp = await post_with_backoff(item)
+            payload = resp.json() if resp.content else {}
+            return payload.get("id")
+    return [r for r in await asyncio.gather(*(safe_post(i) for i in items)) if r]
```

```
$ pytest tests/test_webhook_worker.py -v
PASSED test_handles_empty_204_body_without_json_crash [0.08s]
PASSED test_throttles_concurrent_burst_under_429_limit [0.19s]
PASSED test_idempotent_retry_on_transient_502_gateway [0.14s]
====== 6 passed, 0 failed in 0.41s ======

How your broken script goes from traceback to verified production code

Stage 01 / 15-30 Min

Free Log Triage

Send your traceback & file in Fiverr chat. I confirm whether it fits the $20 quick fix or needs deeper refactoring.

Stage 02 / Reproduce

Sandbox Isolation

Reproduce the exact failure safely in an isolated Docker container without risking your live data.

Stage 03 / Patch

Clean Fix + Guardrails

Fix the root bug cleanly, add defensive error handling, and comment every modified line clearly.

Stage 04 / < 24 Hours

Verified Handover

Receive patched files, a concise root-cause explanation, and terminal proof of passing test cases.

Common Bugs Squashed Daily

Supported Error Categories

1. API, OAuth2 & Webhooks: HTTP 400 / 401 / 403 / 429 errors, expired refresh tokens, HMAC signature mismatches & CORS blocks.

2. Dynamic Playwright & Python Scripts: Broken selectors after page updates, `TimeoutError`, pagination drops & encoding glitches.

3. OpenAI & LLM Integrations: `JSONDecodeError`, truncated responses, Pydantic validation errors & rate-limit crashes.

4. Runtime & Data Crashes: `asyncio` deadlocks, Node.js unhandled promises, Pandas memory spikes & package version conflicts.

Optional Add-Ons: Automated pytest/jest Suite (+$30) | Fiverr Zoom Session (+$40)

Bugfix Tier Breakdown

Basic — Single Bug Triage (1 Day) — $20
Fix 1 isolated traceback, selector, or JSON/API error in 1 file.

Standard — Multi-Bug + Stability (2 Days) — $65
Fix up to 3 bugs, resolve 401/403/429 API errors & add retry guards.

Premium — Full Script Rescue (4 Days) — $145
Deep refactor of broken scripts, async bottlenecks, memory leaks + tests.
